SUMMARY

My professional background is in systems building and troubleshooting, with 15 years across teaching, documentation, operations, SaaS, and organizational systems. It's given me a very large supply of things to notice, and the practical experience to turn observations into something people can actually use.

That work has included reducing onboarding time by 45%, building knowledge systems that teams genuinely adopted, creating AI-powered workflows, and redesigning operational processes so organizations could grow without accumulating unnecessary workarounds.

One of my creations is the Operational Entropy Index. It's a diagnostic framework for identifying, measuring, and reducing the operational drag that companies accumulate as they scale.

SKILLS

Systems Design	Documentation Strategy	Process Optimization	Knowledge Management
Workflow Automation	Confluence	Jira	Hubspot
Pattern Recognition	Cross-Functional Leadership	Founder Dependency Removal	Operational Forensics

PROFESSIONAL EXPERIENCE

Senior Associate Knowledge Manager (Remote Coupa (CA, USA))	September 2026 - Present
• Own knowledge governance and quality standards across the content lifecycle, including publishing, migration, archiving, deletion, and ongoing content hygiene. • Establish and enforce documentation standards for human usability and AI/RAG retrieval, including structure, ambiguity, source quality, and machine legibility. • Govern content intake and handoffs between subject-matter experts and content creators, improving requirements and workflows to enable successful first-pass documentation. • Curate the organization's minimum viable knowledge base by identifying redundancy, conflicting sources, obsolete material, and unnecessary documentation. • Partner cross-functionally to improve documentation as an interface between teams, ensuring operational knowledge is discoverable, authoritative, and fit for purpose.	

Technical Writer (Operational
Documentation) (Remote)

Qount

June 2025 - September 2025

- Rebuilt and migrated 100+ support and product documentation articles from Document360 into HubSpot, eliminating software stack fragmentation and reducing editing friction. Result: decreased clarification meetings by ~30% and standardized information access across support, product, and engineering teams.
- Established documentation standards that ensured consistent topic coverage across all articles, reducing ambiguity and eliminating the need for follow-up clarifications from writers and SMEs

Documentation Team Lead (& Project
Coordinator) (Remote)

Superna

November 2023 - February 2025

- Rebuilt documentation ecosystem of 150+ articles by translating highly technical cybersecurity content into accessible language, validating outdated information, and rewriting from scratch. Result: transformed impenetrable documentation into a resource that enabled teams to reference accurate, human-readable guidance.
- Removed project bottlenecks by establishing clear communication protocols with leadership (PM, VP) and implementing SME coordination processes that captured institutional knowledge from 2 critical retiring team members.
- Established documentation handoff templates and processes connecting dev, product, and CS, standardizing information flow across teams. Result: reduced resolution time and eliminated misunderstandings between technical and customer-facing teams.
- Developed cybersecurity-specific documentation standards that balanced technical depth with clarity, including secure code presentation practices and sensitive information redaction protocols, ensuring compliance without sacrificing explanation.

Documentation Engineer (Remote)

Traze

November 2020 - November 2023

- Built a complete knowledge base of 250+ articles from scratch over 3 years in an organization with zero existing documentation, starting with only CEO access and expanding to capture expertise across the company.
- Systematically captured and published institutional knowledge from isolated SMEs, preventing information silos and process stalls. Drove adoption by actively participating in team communications and surfacing relevant documentation, eliminating dependency on single points of knowledge.
- Established documentation workflows that followed features from planning through delivery across teams, creating a single source of truth that improved cross-team alignment and reduced rework from misalignment.
- Delivered documentation so clear and complete that the company closed a client deal without requiring documentation revisions, eliminating the sales cycle friction that typically delays client onboarding.

Project Manager - Internal Control
Manager (Cali, Colombia)

TWL S.A.S.

December 2018 - November 2020

- Managed end-to-end execution of complex projects including a high-touch drone shoot: coordinating staff scheduling, client management, equipment rental, property logistics, and on-site operations direction.
- Led 50+ staff across 13 simultaneous, unrelated initiatives (charity foundation, VR production, marketing campaigns) by establishing a clear communication hierarchy that prevented bottlenecks and kept teams aligned. Result: improved team efficiency and morale.
- Audited company operations and advised C-suite and board on process improvements, designing workflows that ensured comprehensive task completion and eliminated gaps in execution order.
